

NADELIN NOP

Melbourne, VIC +61 434 782 411 nadelinnop19@gmail.com [in linkedin.com/in/Nadelin-Nop](https://www.linkedin.com/in/Nadelin-Nop) github.com/NadelinNop

Technical Skills

Languages: C#, JavaScript/TypeScript, Python, Java, SQL
Backend: .NET 10, ASP.NET MVC, REST APIs, Entity Framework, modular monolith architecture
Frontend: React 19, Tailwind CSS **Data & ML:** Pandas, Scikit-learn, TensorFlow, PyTorch
Cloud & Tooling: Azure (Container Apps, SQL Database, Blob Storage, Key Vault, Entra ID, OpenAI), Docker, Git/GitHub, Jira

Professional Experience

Graduate Software Engineer

2024–Present

Monitor CRMS

Melbourne, Australia

- Resolved 56+ Jira tickets spanning bug fixes and feature shipments across CRM platform
- Cut production support tickets on real time event-driven email module from 6/month to zero, fixing defects in the scheduling logic and optimising slow log-write queries
- One of two engineers rewriting the platform from legacy ASP.NET MVC to containerised React 19 / .NET 10, re-architecting the C# backend into a modular monolith (ongoing).
- Contributed to code reviews and sprint planning, improving release velocity by 20% in Agile workflows.

Software Engineer Intern

2023–2024

Qeeri AI

Melbourne, Australia

- Built backend services and RESTful APIs for an AI-powered educational platform using C and ASP.NET MVC
- Designed Azure infrastructure using SQL Database, Blob Storage, and Azure OpenAI for personalised student feedback

Software Engineer Intern

2023

Botum Guide

Phnom Penh, Cambodia

- Built and styled a responsive frontend using React and Tailwind CSS for an e-commerce admin dashboard.
- Developed backend logic to manage stock inventory, CRUD operations, and admin-level user roles.

Projects

Sentiment-Based Stock Advisor | Python, Flask, JavaScript

- Built a web application that aggregates news headlines and public sentiment to score stock tickers in real-time.
- Implemented NLP sentiment analysis using Vader and custom lexicons tailored to financial context.
- Visualized sentiment scores and trends to assist trading decisions.
- Awarded **Most Innovative Startup** and selected as a **finalist** at StartHack 2023.

Decentralized Trading Platform | React, Node/Express, Web3.js, Solidity

- Asset trading system with Solidity smart contracts and a Web3.js bridge to the chain.
- Real-time listings and account dashboards for asset management.

Quantitative Stock Modeling | Python, TensorFlow

- Developed stock price prediction models using LSTM and ARIMA for historical financial data.
- Preprocessed data with MinMaxScaler and engineered features for better trend learning.
- Applied ensemble techniques to improve accuracy, and visualized predictions using candlestick and box plots.

Education

Swinburne University of Technology

Melbourne, Australia

B.Sc. in Computer Science – Software Development and AI (GPA: 3.9)

2022 – 2024

- International Excellence Scholarship recipient
- AAA* grades in Cambridge A Level Mathematics, Computer Science and Biology

Awards

2025 — Finalist, Macathon (Monash): campus social app tackling student loneliness; led frontend and user flows.
2025 — Finalist, eSafety Hackathon: built and pitched a tool addressing online radicalisation and harm prevention.
2023 — Most Innovative Startup and Finalist, StartHack (Monash × University of Melbourne).
